Lecture 2 - Lab

Lab 2

- Exercise 1:

- Create **Admin** Object and **Guest** object that inherit from Object called **User**.
- The **User** Object have 3 properties **userName** , **userGender** and **mobileNumber**.
- **Admin** must have **Email** property and both of **admin** and **guest** object must have **role** property Ex: Admin or Guest.
- Create **function** that Asks the user about his **role** either Admin or Guest .
- Based on user choice , Ask him to enter his data and store them on your code.

Lab 2

- **Exercise 1:**

- If the **user** enter the same mobile number again , Alert that : **this user is already exist** otherwise follow the happy scenario.

Lab 2

- **Exercise 2:**

- Ask the user to enter `number of seconds`.
- Create `function` that accept number of seconds as a parameter and return another function that alert `'Timeout'` message after number of seconds that user entered.
- **NOTE:** Handel all edge cases on your code.
